Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over LaBate et al in view of Soofi et al. LaBate et al teaches an apparatus for lining a tundish (a metallurgical vessel) including a strut and brace structure (figures 2 and 3 for example) covered by a plurality of panels (33) which overlap showing all aspects of the above claims except the provision that the struts and braces be made adjustable in the manner recited in the above claims. Soofi et al teaches a frame for a lining apparatus for lining a tundish which includes a plurality of struts and a plurality of braces which are adjustable through the use of an adjustable connector including pins allowing for adjustability of both the struts and braces (see the embodiment of figure 4 for example), where the adjustability provided by this arrangement allows for the use of the same frame for the lining of many different sizes of vessels thereby increasing the usefulness of the lining apparatus (see col. 2 lines 10-20 for example). Because improved usefulness would also be desirable in the lining apparatus shown by LaBate et al, motivation to construct the frame of LaBate et al through the use of adjustable struts and braces in the manner shown by Soofi et al, in order to allow the apparatus to be used and re-used to line different sizes and shapes of vessels, would have been a modification obvious to one of ordinary skill in the art at the time the invention was made.
